## EDUCATION

|                                                                                                                                                                                                                                                                                                  |                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------|
| <b>University of Wisconsin–Madison</b><br><i>Bachelor of Science in Computer Science and Data Science</i>   GPA: 3.91/4.0<br>• <b>Relevant coursework:</b> Artificial Intelligence, Statistical Modeling, Linear Algebra, Data Structures & Algorithms, Data Science Programming, Discrete Math. | <b>Madison, WI</b><br><i>Expected Graduation: May 2027</i> |
| <b>The George Washington University</b><br><i>Undergraduate coursework in Computer Science and Data Science</i>   GPA: 3.94/4.0                                                                                                                                                                  | <b>Washington, DC</b><br><i>2023 – 2024</i>                |

## SKILLS

|                      |                                                                                                                                        |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming:</b>  | Python, TypeScript, SQL, Java, Go, C++                                                                                                 |
| <b>Technologies:</b> | Gemini API, multi-agent orchestration, JSON Schema, FastAPI, React, Next.js, Node.js, PostgreSQL, Redis, REST APIs, SSE, Docker, CI/CD |

## PROFESSIONAL EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------|
| <b>Global AI (Global API Inc.)</b><br><b>Full-Stack Engineering Intern</b><br>• <b>Led backend development of an AI video generation feature</b> , integrating Gemini model calls into FastAPI services backed by PostgreSQL and Redis.<br>• <b>Orchestrated parallel keyframe and video tasks</b> with cached intermediate outputs to avoid repeated model calls in long-running workflows.<br>• <b>Worked directly with the CEO and four departments</b> to assess AI workflow needs and deliver an SSE-streamed dashboard showing generation progress in real time. | <b>New York, NY   Hybrid</b><br><i>May 2026 – Present</i>   |
| <b>Guangdong Akang Health Technology Group Co., Ltd.</b><br><b>AI &amp; Software Engineering Intern</b><br>• <b>Designed multi-agent research workflows</b> with evidence grading, human review checkpoints, and automated validation for pharmaceutical market intelligence.<br>• <b>Developed searchable interfaces and structured exports</b> with source IDs, URLs, retrieval dates, and citation checks so AI-assisted findings remained auditable.                                                                                                               | <b>China   On-site</b><br><i>Jul 2026 – Aug 2026</i>        |
| <b>China Association for Science and Technology (CAS)</b><br><b>Research Assistant</b><br>• Analyzed policy trends across AI and strategic technology ecosystems, synthesized multi-source findings, and <b>built a Python-based linear model</b> to support quantitative forecasting and analysis for project stakeholders.                                                                                                                                                                                                                                           | <b>United States   Remote</b><br><i>Dec 2024 – Feb 2025</i> |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                          |                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------|
| <b>ClearMove – AI-Powered Rental Evidence Platform</b><br><i>Technologies used:</i> Gemini API, Next.js, TypeScript, React, PostgreSQL, Drizzle ORM, pdf-lib<br>• <b>Integrated Gemini into a rental evidence workflow</b> to transform lease and inspection inputs into auditable, timestamped PDFs; shipped a deployed product informed by 50+ stakeholder interviews. | <i>Oct 2025 – Present</i> |
| <b>Multi-Agent OpenClaw</b><br><i>Technologies used:</i> TypeScript, Node.js, Express, Zod, REST APIs, agent orchestration, persistent memory<br>• <b>Built an agent orchestration system</b> that routes requests by task type and complexity, persists run memory, and gates Markdown/DOCX outputs with automated QA; validated core flows with 7 tests.               | <i>Jan 2026 – Present</i> |
| <b>Badminton AI Match Analysis</b><br><i>Technologies used:</i> Python, computer vision, player tracking, pose estimation, video processing<br>• <b>Built a computer-vision match-analysis pipeline</b> that tracks two players, overlays pose estimates, recovers shuttle motion, and renders annotated match video.                                                    | <i>2026</i>               |

## ACTIVITIES

|                                                                                                                                                                      |  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>UW-Madison Data Science Club</b><br>• Promoted coding events and online talks to UW–Madison students and <b>organized weekly Python, R, and Excel workshops</b> . |  |
| <b>Vex Robotics Club</b><br>• <b>Built and maintained a C++ robot</b> and evaluated routing strategies to select optimal moves during matches.                       |  |

## ACHIEVEMENTS

|                                                                                                                           |  |
|---------------------------------------------------------------------------------------------------------------------------|--|
| 1. <b>Second Place</b> , 2026 Cursor Hackathon — TableUs                                                                  |  |
| 2. <b>Third Prize</b> , 2025 Badger Build Fest Venture Track — ClearMove                                                  |  |
| 3. <b>Second Place</b> , 2024 GWU Data Science Association Datathon (Python-based)                                        |  |
| 4. <b>Second Place (Skills)</b> and <b>Third Place (Qualification)</b> , 2023 VEX Robotics World Championship (C++-based) |  |
