

CHING-WEI KANG

Madison, WI | 347-866-8326 | ckang53@wisc.edu | [LinkedIn](#)

SUMMARY

Computer Science and **Data Science** student at the University of Wisconsin–Madison with experience in full-stack development, AI-powered applications, and data engineering. Seeking Software Engineering internships where I can contribute to developer tools, intelligent systems, and scalable, user-focused products.

EDUCATION

University of Wisconsin-Madison

Madison, WI

Bachelor of Science in Computer Science and Data science | GPA: 3.75 / 4.0

Expected Graduation: May 2027

- Relevant coursework: Data Structures & Algorithms, Artificial Intelligence, Computer Engineering, Discrete Math, Data Science Programming, Statistical Modeling, Matrix & Linear Algebra and Mathematical Reasoning.

SKILLS

Programming:

Java, Python, JavaScript, TypeScript, SQL, C++, C, Bash, R

Technologies:

React, Next.js, Node.js, NestJS, Flask, PostgreSQL, Git, AWS, Tailwind CSS, Drizzle ORM, REST APIs, Gemini API

PROFESSIONAL EXPERIENCES

The Marcus Harris Foundation

Washington, DC

Data Engineering & Automation Intern

Sept 2024 - Dec 2024

- Designed and implemented a **web data ingestion pipeline** using **Python (BeautifulSoup, Requests, Pandas)** to automate the extraction and transformation of nonprofit tax data from multiple public registries
- Developed custom **HTML parsing logic** and regex-based filters to capture critical attributes—including filing year, tax category, EIN, and geographic region—and integrated structured outputs into **PostgreSQL** with 98% accuracy across 50,000+ records.

China Association for Science and Technology (CAS)

Remote, United States

Research Assistant

Dec 2024 – Feb 2025

- Conducted research on AI and strategic technology ecosystems by analyzing policy trends, synthesizing multi-source findings, and building a Python-based linear model to support prediction and quantitative analysis for project stakeholders.

PROJECTS

ClearMove - Rental Evidence Platform (AI powered platform)

Oct 2025 - Present

Technologies used: Next.js, TypeScript, React, Node.js, PostgreSQL, Drizzle ORM, Google Gemini API, pdf-lib

- Led a team from concept to working prototype, conducting discovery interviews with 50+ stakeholders to identify pain points and workflow requirements; awarded Third Prize in the University of Wisconsin Madison-Venture Track.
- Built the frontend and backend, including **Next.js** admin page and renter apps, token-based invite/onboarding flow, and database schema linking companies, units, renters, and inspection submissions in **PostgreSQL**. Developed AI document-processing **pipelines** that parse PDFs into structured data and generate timestamped inspection PDFs as shared evidence for renters and property managers.

AI-Powered Interactive Game - "Dungeons & Dragons Adventure"

Sept 2025 - Present

Technologies used: React, TypeScript, Tailwind CSS, Google Gemini API (Pro Flash, Imagen, Veo), JSON Schema, Node.js

- Developed an **AI-driven narrative RPG web application** inspired by *Dungeons & Dragons*, leveraging **Google Gemini APIs** to create a dynamic, player-driven storytelling experience with real-time text, image, and video generation
- Built modular, component-based UI architecture in **React + Tailwind**, including modules for character creation, stat tracking, and adventure logging; implemented **responsive layouts** and **parallax effects** for enhanced UX.

multi-agent-openclaw

Jan 2026 - Present

Technologies used: TypeScript, Node.js, Express, Zod, REST APIs, dotenv, local orchestration systems, file-based workflow pipelines

- Developed a desktop-first **multi-agent** orchestration workspace for AI-assisted research and writing, with structured role assignment, workflow staging, task-aware execution, and persistent run memory to improve productivity and output reliability. Built local orchestration stack with a browser UI, **local API server**, provider layer, and file-based export system, enabling inspectable **execution pipelines**, context retrieval, and developer-friendly workflow management for real-world **LLM** and **agent use cases**.

ACTIVITIES

UW-Madison Data Science Club

- Promoted coding-related events and online talks to UWM students, Organized weekly Python, R and Excel skills workshop

Vex Robotics Club

- Built and maintained a robot in C++ with active route investigation to decide on the next optimal move strategies during match.

ACHIEVEMENTS

- 3rd Place in University of Washington Hackathons of 2025
- 2nd place in the Datathon competition of the GWU Data Science Association of 2024 (Python Based)
- 2nd Place (Skills) and 3rd Place (Qualification) in 2023 VEX Robotics World Championship (C++ Based)
