

CHING-WEI (WILLIAM) KANG

Madison, WI | 347-866-8326 | ckang53@wisc.edu | [linkedin.com/in/kcw2027](https://www.linkedin.com/in/kcw2027) | github.com/WilliamK112

EDUCATION

University of Wisconsin-Madison

B.S. Computer Science and Data Science | GPA: 3.91/4.0

Relevant coursework: Data Structures & Algorithms, Artificial Intelligence, Computer Engineering, Discrete Math, Statistical Modeling, Linear Algebra.

Madison, WI

Expected May 2027

SKILLS

Programming: Python, TypeScript, Java, SQL, Go, C++

Technologies: Next.js, React, Node.js, FastAPI, Express, PostgreSQL, Redis, SQLite, Docker, AWS, REST APIs, RBAC, SSE, CI/CD

PROFESSIONAL EXPERIENCE

Global AI (Global API Inc.)

New York, NY | Hybrid

Full-Stack Engineering Intern

May 2026 - Present

- **Led backend development** to make an AI video generation platform production-ready, using FastAPI, Gemini, PostgreSQL, and Redis to orchestrate validated multistage jobs with asynchronous execution and failure recovery.
- **Reduced redundant model work and release risk** by implementing parallel execution, cache-backed processing, RBAC, observability, and CI/CD, improving reliability across long-running generation workflows and repeatable production releases.
- **Aligned engineering delivery** with company priorities by partnering with the CEO and four departments, translating product requirements into an SSE-streamed dashboard that improved real-time review, debugging, and release visibility.

Guangdong Akang Health Technology Group Co., Ltd.

China | On-site

AI & Software Engineering Intern

Jul 2026 - Aug 2026

- **Made fragmented pharmaceutical evidence searchable and reusable** by building interfaces and JSON/SQLite pipelines that normalized reports, legal evidence, company, and partner records with provenance, validation metadata, and reproducible exports.
- **Improved trust in AI-assisted research** by combining automated completeness, citation, and source-coverage checks with human review checkpoints, producing auditable evidence for downstream pharmaceutical decisions.

China Association for Science and Technology (CAST)

United States | Remote

Research Assistant

Dec 2024 - Feb 2025

- **Supported national research decisions on AI talent allocation** by reconciling policy and institutional sources in Python, building a documented linear forecasting model, and delivering reproducible evidence to project stakeholders.

The Marcus Harris Foundation

Washington, DC

Data Engineering and Automation Intern

Sep 2024 - Dec 2024

- **Made fragmented nonprofit registry data usable for reporting** by building a Python ingestion service with BeautifulSoup, Requests, and Pandas, adding reusable parsers, schema checks, and auditable source fields.
- **Improved downstream reporting quality** by loading 50,000+ records into PostgreSQL with 98% accuracy and applying validation and filters across EIN, filing year, tax category, and geography.

SELECTED PROJECTS

ClearMove - Rental Evidence Platform

Oct 2025 - Present

Technologies: Next.js, TypeScript, PostgreSQL, Drizzle ORM, REST APIs, pdf-lib

- **Shipped a deployed full-stack platform** that converts lease and inspection inputs into auditable, timestamped PDFs across 21 API routes and 10 PostgreSQL tables, informed by 50+ stakeholder interviews and production-ready data exports.

Multi-Agent OpenClaw

Jan 2026 - Present

Technologies: TypeScript, Node.js, Express, Zod, REST APIs, persistent run state, automated tests

- **Built an orchestration API** with schema validation, persistent run memory, task routing, and QA-gated document exports; covered core workflows with seven automated tests and repeatable QA regression checks across document workflows.

TableUs - Group Restaurant Discovery

2026

Technologies: Next.js, React, Python, FastAPI, Gemini API, Google Maps API

- **Built a full-stack recommendation workflow** that combines group preferences, geospatial context, and natural-language input; earned Second Place at the 2026 Cursor Hackathon through an explainable, location-aware group decision flow.

Badminton AI Match Analysis

2026

Technologies: Python, computer vision, player tracking, pose estimation, video processing

- **Developed a two-player analysis pipeline** with stable tracking, pose overlays, shuttle recovery, and annotated video outputs for repeatable match review and model debugging.

OPEN SOURCE

- **Contributed 201 merged pull requests** to external repositories, working through maintainer review, automated tests, and CI workflows across production developer tools.
- **Shipped reviewed contributions** to GitHub Docs, Docker CLI, Microsoft APM, NVIDIA NemoClaw, Meta DotSlash, Repomix, and additional open-source projects.

ACHIEVEMENTS

- Third Prize, 2025 Badger Build Fest Venture Track - ClearMove
- Second Place (Skills) and Third Place (Qualification), 2023 VEX Robotics World Championship
