EDUCATION

University of Wisconsin–Madison	Madison, WI
<i>Bachelor of Science in Computer Science and Data Science GPA: 3.91/4.0</i>	<i>Expected Graduation: May 2027</i>
• Relevant coursework: Artificial Intelligence, Statistical Modeling, Linear Algebra, Data Structures & Algorithms, Data Science Programming, Discrete Math.	
The George Washington University	Washington, DC
<i>Undergraduate coursework in Computer Science and Data Science GPA: 3.94/4.0</i>	<i>2023 – 2024</i>

SKILLS

Programming:	Python, TypeScript, SQL, Java, Go, C++
Technologies:	Gemini API, multi-agent orchestration, JSON Schema, FastAPI, React, Next.js, Node.js, PostgreSQL, Redis, REST APIs, SSE, Docker, CI/CD

PROFESSIONAL EXPERIENCE

Global AI (Global API Inc.)	New York, NY Hybrid
Full-Stack Engineering Intern	<i>May 2026 – Present</i>
• Led backend development of an AI video generation feature, integrating Gemini model calls into FastAPI services backed by PostgreSQL and Redis. • Orchestrated parallel keyframe and video tasks with cached intermediate outputs to avoid repeated model calls in long-running workflows. • Worked directly with the CEO and four departments to assess AI workflow needs and deliver an SSE-streamed dashboard showing generation progress in real time.	
Guangdong Akang Health Technology Group Co., Ltd.	China On-site
AI & Software Engineering Intern	<i>Jul 2026 – Aug 2026</i>
• Designed multi-agent research workflows with evidence grading, human review checkpoints, and automated validation for pharmaceutical market intelligence. • Developed searchable interfaces and structured exports with source IDs, URLs, retrieval dates, and citation checks so AI-assisted findings remained auditable.	
China Association for Science and Technology (CAS)	United States Remote
Research Assistant	<i>Dec 2024 – Feb 2025</i>
• Analyzed policy trends across AI and strategic technology ecosystems, synthesized multi-source findings, and built a Python-based linear model to support quantitative forecasting and analysis for project stakeholders.	

PROJECTS

ClearMove – AI-Powered Rental Evidence Platform	<i>Oct 2025 – Present</i>
Technologies used: Gemini API, Next.js, TypeScript, React, PostgreSQL, Drizzle ORM, pdf-lib	
• Integrated Gemini into a rental evidence workflow to transform lease and inspection inputs into auditable, timestamped PDFs; shipped a deployed product informed by 50+ stakeholder interviews.	
Multi-Agent OpenClaw	<i>Jan 2026 – Present</i>
Technologies used: TypeScript, Node.js, Express, Zod, REST APIs, agent orchestration, persistent memory	
• Built an agent orchestration system that routes requests by task type and complexity, persists run memory, and gates Markdown/DOCX outputs with automated QA; validated core flows with 7 tests.	
Badminton AI Match Analysis	<i>2026</i>
Technologies used: Python, computer vision, player tracking, pose estimation, video processing	
• Built a computer-vision match-analysis pipeline that tracks two players, overlays pose estimates, recovers shuttle motion, and renders annotated match video.	

ACTIVITIES

UW-Madison Data Science Club
• Promoted coding events and online talks to UW–Madison students and organized weekly Python, R, and Excel workshops.
Vex Robotics Club
• Built and maintained a C++ robot and evaluated routing strategies to select optimal moves during matches.

ACHIEVEMENTS

1. Second Place , 2026 Cursor Hackathon — TableUs
2. Third Prize , 2025 Badger Build Fest Venture Track — ClearMove
3. Second Place , 2024 GWU Data Science Association Datathon (Python-based)
4. Second Place (Skills) and Third Place (Qualification) , 2023 VEX Robotics World Championship (C++-based)
